Ron,
Had talk with Caolyn Fitzsimons today and promised we would have draft position on glucose and lipids available by end of Wednesday. Regarding weight, the key fact is 3-3.5 kg wt gain after 52 weeks. I don't know how you can spin that and therefore hope team can settle on positioning on glucose metabolism that will largely de-emphasize weight gain.
Martin

Martin,

Thank you.

Regards,

Ron

Subject: Brecher weight manuscript

All,

Could someone please send me a copy of the weight manuscript that was submitted for publication in the last few months. I have earlier drafts, but don't seem to have the version that was submitted. Also, I would appreciate having Dr. Leigh Jefferies (Medical Director, Drug Safety, AZ) copied. Thank you.

Regards,

Ron
